"Modular Java" is a pragmatic guide to developing modular applications using OSGi, the framework for dynamic modularity in Java, and Spring Dynamic Modules, an OSGi extension to the Spring Framework. In the late 1980s, the Alevis, at that time thought to be largely assimilated into the secular Turkish mainstream, began to assert their difference as they never had before. The question of Alevism's origins and its relation to Islam and to Turkish culture became a highly contested issue. According to the dominant understanding, Alevism is part of the Islamic tradition, although located on its margins. It is further assumed that Alevism is intrinsically related to Anatolian and Turkish culture, carrying an ancient Turkish heritage, leading back into pre-Islamic Central Asian Turkish pasts. Dressler argues that this knowledge about the Alevis-their demarcation as "heterodox" but Muslim and their status as carriers of Turkish culture-is in fact of rather recent origins. It was formulated within the complex historical dynamics of the late Ottoman Empire and the first years of the Turkish Republic in the context of Turkish nation-building and its goal of ethno-religious homogeneity. Neat, in a white shirt and sports jacket, with his grey fedora cocked to the side, his crooked grin made you smile. Without warning the heavy door would swing open and the waiters would come outside to join him. They were dressed in pajamas or prison garb, with hats and horns, and were there to warm up the crowd. Some in line expected this, others were shocked. The pink polka dot building should have been a warning. Complete strangers in line became chummy, exchanging stories they had heard; toilet seat covers to serve drinks on, microphones in the ladies room, toilet paper for napkins. Most had brought their friends there to be roasted. The line of people varied in age. They all dressed casually because they'd heard you could get a pie in the face or a squirt in the eye. The club's routines were blue in color, but harmless. If you were lucky you might see a "Balls for the Queen" or a "Singing beer." The price was always right for a good time and Warm Beer and Lousy Food was the place to be. In the fall of 1930, David Packard left his hometown of Pueblo, Colorado, to enroll at Stanford University, where he befriended another freshman, Bill Hewlett. After graduation, Hewlett and Packard decided to throw their lots in together. They tossed a coin to decide whose name should go first on the notice of incorporation, then cast about in search of products to sell. Today, the one-car garage in Palo Alto that housed their first workshop is a California historic landmark: the birthplace of Silicon Valley. And Hewlett-Packard has produced thousands of innovative products for millions of customers throughout the world. Their little company employs 98,400 people and boasts constantly increasing sales that reached \$25 billion in 1994. While there are many successful companies, there is only one Hewlett-Packard, because from the very beginning, Hewlett and Packard had a way of doing things that was contrary to the prevailing management strategies. In defining the objectives for their company, Packard and Hewlett wanted more than profits, revenue growth and a constant stream of new, happy customers. Hewlett-Packard's success owes a great deal to many factors, including openness to change, an unrelenting will to win, the virtue of sustained hard work and a company-wide commitment to community involvement. As a result, HP now is universally acclaimed as the world's most admired technology company; its wildly successful approach to business has been immortalized as The HP Way. In this book, David Packard tells the simple yet extraordinary story of his life's work and of the truly exceptional company that he and Bill Hewlett started in a garage 55 years ago. Some one hundred years ago the founding fathers optimistically launched psychology as a science. The premise was that the new science must break away from its parental ties to philosophy and confine itself to gathering data, preferably in the psychology laboratory. There is little doubt that this early commitment to an "observation and accumulation of data only" policy was helpful in the launching of the new science. Some idea of how critical this move to empiricism was can be gathered from the following quotation taken from Wolman (1973, p. 32): It was not an easy task to transform the old "mental philosophy" into a natural science. Natural science used observation and experimentation; they observed their subject matter, as it were, from without. Wundt's psychology was supposed to study observable stimuli and responses, but there was so much that was unobservable in psychology. Although the launching was eventually a success, there is little doubt that the high hopes of the founding fathers have not materialized.
